Mention millwork in this part of Wisconsin and chances are, people will steer you to Brunsell Lumber & Millwork. Custom woodworking has been an integral part of Brunsell since the company was founded in 1938 by William & Elmer Brunsell. With nearly seventy five years of experience, we provide the highest quality architectural millwork available. We use the finest, most durable materials exclusively and our craftsmen are highly skilled in the use of modern millwork equipment to create virtually anything from wood. From staircases and mantels to custom mouldings and doors, you can count on Brunsell Lumber & Millwork for quality, value and beauty.

This catalog represents our library of moulding patterns. If you do not see a profile, or need to match an existing pattern, let us know. We are able to precision grind knife steel to almost any profile you may require. We are committed to offering high quality products at competitive prices. Since costs for materials change in a non-uniform manner, we have elected not to print prices in this catalog. This allows us to keep our prices current with the market, affording our customers the best possible prices at all times.
